**Le numerose linee di cuscinetti e componenti ISB® consentono di soddisfare le esigenze nei più svariati settori applicativi. L'ampia gamma e la qualità dei prodotti è tale da garantire applicazioni anche in condizioni d'impiego gravose. I cuscinetti e componenti ISB® vantano una produzione articolata e completa di tutte le tipologie, indicata pertanto a soddisfare le più svariate esigenze applicative.**

*The diverse product lines of ISB® bearings and components make it possible to satisfy the needs of a wide variety of fields of application. The wide range and quality of products is also a guarantee for heavy duty applications. ISB® bearings and components are available in versions across-the-board and can meet the requirements of a wide variety of demanding applications.*

**Ingrassatore per lubrificazione**

*Grease nipple for lubrication*

**Doppia tenuta: lamierino di protezione più tenuta in gomma**

*Double protection: combination of steel and rubber seal*

**Foro di fissaggio del supporto**

*Self-aligning bearing units fixing hole*

**Superficie sferica orientabile**

*Self-aligning surface*

**Grano di fissaggio fornibile anche con bussola o collare eccentrico di fissaggio**

*Set screw fixing also available with eccentric collar or tapered adapter sleeve*

**Corona a un giro di sfere**

*Single row deep groove ball bearing*

**Supporto monoblocco in ghisa**

*One-piece cast iron housing*

**Anello interno temperato e rettificato**

*Hardened ground inner ring*

Il marchio **ISB®**, rappresenta una gamma d'articoli tecnici la cui produzione viene affidata ad un pool di costruttori, che hanno saputo mettere a frutto l'esperienza maturata da ormai diversi decenni nel settore. L'elevato know-how tecnico insieme ad apparecchiature d'alto livello sono in grado di garantire una produzione con standard di qualità elevati, sia per ciò che concerne le fasi di produzione, che il controllo dei prodotti finiti. All'interno di questo catalogo tecnico viene illustrata la gamma dei prodotti; inoltre si ricorda che per applicazioni speciali è possibile contattare l'ufficio tecnico.

Lo scopo principale di questo catalogo tecnico è di aiutare i progettisti, cercando di fornire loro le informazioni necessarie per trovare le migliori applicazioni e soluzioni possibili per ciò che riguarda le attività di loro competenza.

La prima parte del catalogo tecnico, illustra le caratteristiche tecniche generali di tutti i supporti in ghisa e dei cuscinetti **ISB®** (caratteristiche costruttive, tolleranze, coefficienti di carico e durata, giuoco del cuscinetto, lubrificazione, ed altre informazioni di vario genere), a seguito vengono indicate le tabelle dimensionali dei prodotti. Nella seconda parte del catalogo, sono illustrate le caratteristiche e le tabelle dimensionali dei supporti della serie pesante, dopodiché nella terza parte si passerà ai supporti in plastica. Tutte le caratteristiche tecniche di costruzione, sono in accordo con le norme ISO e DIN, questo per garantire un prodotto d'elevata qualità, che mantenga le medesime caratteristiche nel tempo e che sia intercambiabile con i marchi più prestigiosi a livello mondiale.

*The **ISB®** trademark represents a range of technical articles, the production of which is entrusted to a pool of constructors who, exploit their several decades of experience in the sector. High level technical know-how together with advanced equipment guarantee elevated production standards both in the productive phase as well as the quality control phase on the finished product. This technical catalogue illustrates our range of products; though special applications are possible by contacting our technical office as well.*

*The principal objective of this technical catalogue is to help project managers by furnishing them with the necessary information to find the best applications and solutions possible for the activity of their competence.*

*The first part of this technical catalogue illustrates the general technical characteristics of all the housings in cast iron and the **ISB®** ball bearings (constructive characteristics, tolerances, load and duration coefficients, clearance of the ball bearing, lubrication and various other general information), followed by tables with the sizes of the products. In the second part of the catalogue the characteristics are illustrated in the tables the sizes of the heavy series housings are listed, after which is the third part which moves to the plastic housings.*

*All of the technical characteristics of construction are in accordance with ISO and DIN rules, in order to guarantee an elevated product which maintains the same characteristics over time and is interchangeable with more well known brands on a world wide level.*

I supporti **ISB®** sono costruiti in molteplici esecuzioni, con corpo esterno in ghisa, in lega d'alluminio, in lamiera d'acciaio stampato ed in plastica. I supporti sono forniti completi di cuscinetto, dotato di anello esterno sferico che può oscillare nella corrispondente pista ricavata nel supporto, in modo tale da compensare qualsiasi difetto d'allineamento, eliminando le sollecitazioni tra albero e supporto. Il cuscinetto inserito nell'alloggiamento del supporto, è corrispondente per le sue caratteristiche costruttive interne ai cuscinetti della serie 62 o 63 secondo le tabelle ISO.

***ISB®** housings are constructed in multiple executions, with external parts in cast iron, bound with aluminium, in moulded steel sheets and in plastic.*

*The housing units are supplied complete with ball bearing, provided with external ball rings which can oscillate in the corresponding track hollowed out in the casting, in such a way as to compensate for any defect of alignment, eliminating solicitation between the shaft and the prop. It corresponds to the internal constructive characteristics of the 62 or 63 series according to the ISO tables.*

Su entrambi i lati del cuscinetto, sono montate delle guarnizioni di tenuta, studiate e particolarmente indicate per garantire una perfetta tenuta ed evitare così eventuali infiltrazioni di polvere, umidità e fluidi di vario genere. Tutti i cuscinetti sono pre-ingrassati e ri-lubrificabili, fatta eccezione per le serie: CB - RB - SA - SB, che sono lubrificati per tutto l'arco della loro vita.

Nel caso che i supporti debbano essere utilizzati in condizioni particolarmente critiche, come in ambienti dove operano aziende agricole, siderurgiche, fonderie, tutti i supporti possono essere forniti di coperchi di protezione supplementare. I coperchi possono essere costruiti in ghisa grigia o in lamiera d'acciaio o in plastica e sono costituiti in modo tale da garantire anche un'eventuale sostituzione delle tenute in gomma, con comuni anelli in feltro. Esistono anche dei coperchi chiusi, utilizzabili in applicazioni ove l'albero non è passante.

*Specially studied and particularly indicated resistance gaskets are located on both sides of the ball bearing, to guarantee perfect resistance, this avoids eventual infiltration from dust, humidity and fluids of various types.*

*All of the ball bearings are pre-lubricated and can be lubricated repeatedly, except the series: CB - RB - SA - SB, which are lubricated for their lifetime.*

*Should the housing be used in particularly critical conditions such as the ambient where agricultural companies or iron and steel foundries operate, all of the housings can be supplied with supplementary protective covers.*

*The covers can be constructed in grey cast iron or in steel sheets or in plastic and are constructed in such a way as to guarantee even eventual substitution of rubber seals with common felt rings. There are also closed covers used in applications where the shaft does not pass.*

## 2.1

### MATERIALE DEI CUSCINETTI

### BEARINGS MATERIAL

**mayoral**  
Suministros Industriales y Servicios

Il materiale delle piste di rotolamento e delle sfere dei cuscinetti, deve avere la necessaria durezza e mantenere le sotto indicate qualità:

*The materials used to construct the rolling track and the bearing spheres must have the necessary hardness and maintain the qualities indicated below.*

1. elevata resistenza contro ripetuti sforzi, che possono causare fratture per affaticamento della superficie nelle piste di rotolamento, che regolano la vita del cuscinetto.
2. elevata resistenza ed elasticità dei materiali per prevenirne la deformazione, nel momento in cui sono applicati dei forti carichi sulla superficie.
3. elevata resistenza all'abrasione, per contrastare efficacemente l'attrito radente tra gabbia e sfere.
4. elevata resistenza contro rotture causate da urti, guasti e/o avarie per errate applicazioni o montaggi impropri.
5. piccoli cambiamenti che possono avvenire nel tempo, per quanto riguarda le dimensioni e la forma dovuti a sollecitazioni interne o variazioni di struttura.

1. *elevated resistance against repeated straining that can cause fractures due to wear and tear on the surface of the rolling track which regulates the life of the bearing.*
2. *elevated resistance and elasticity of the materials in order to prevent deformation when heavy loads are applied to the surface.*
3. *elevated resistance to abrasion to effectively contrast against wear and tear between the cage and the sphere.*
4. *elevated resistance against breaking caused by collision, breakage and or breakdown due to incorrect application or improper assemblage.*
5. *small changes which could occur over time due to internal solicitation or structural variations.*

GCr15 acciaio <JIS G4805> (acciaio con elevato contenuto di carbonio e cromo, per cuscinetti), questa tipologia d'acciaio è in grado di soddisfare quanto riportato nei punti precedenti, e la sua composizione chimica viene mostrata nella tabella che segue.

*GCr15 steel <JIS G4805> (steel with and elevated carbon or chrome content for bearings), is type of steel which is capable of satisfying all of the above points and the chemical composition is shown in the following table.*

**Composizione chimica dell'acciaio con elevato contenuto di carbonio e cromo per cuscinetti**  
*Chemical composition of high carbon chromium bearing steel*

Classificazione <i>Class</i>	Simboli <i>Symbols</i>	Carbonio <i>Carbon</i>	Silicio <i>Silicon</i>	Manganese <i>Manganese</i>	Fosforo <i>Phosphorus</i>	Zolfo <i>Sulphur</i>	Cromo <i>Chromium</i>
	<b>JIS</b>	<b>C</b>	<b>Si</b>	<b>Mn</b>	<b>P</b>	<b>S</b>	<b>JIS</b>
1	SUJ 1	0,95 ~ 1,10	0,15 ~ 0,35	> 0,50	> 0,025	> 0,025	0,90 ~ 1,20
2	SUJ 2	0,95 ~ 1,10	0,15 ~ 0,35	> 0,50	> 0,025	> 0,025	1,30 ~ 1,60
3	SUJ 3	0,95 ~ 1,10	0,40 ~ 0,70	0,90 ~ 1,15	> 0,025	> 0,025	0,90 ~ 1,20

Per mantenere costante la qualità nel tempo, vengono effettuati tutta una serie di controlli sotto riportati:

- analisi chimiche sulla composizione
- esplorazioni magnetiche
- prove di rumorosità e vibrazione
- corrosione da contatto con sostanze acide
- controlli visivi
- controlli della struttura al microscopio
- test di durezza dei materiali
- prove d'affaticamento

*In order to maintain the quality constant over time, the entire series of tests reported below are performed:*

- *chemical analysis of the composition.*
- *magnetic exploration*
- *noise and vibration tests*
- *corrosion from contact with acid substances.*
- *visual inspection*
- *microscopic inspection*
- *hardness tests on the materials*
- *stress tests*

**2.2**

**MATERIALE DELLE GABBIE E DEI RIVETTI**  
*CAGES AND RIVETS MATERIAL*

La composizione del materiale di costruzione delle gabbie è conforme alle norme JIS G 3141; le gabbie sono costituite da lamine d'acciaio al carbonio rullato, raffreddato e pressato SPCC.

La composizione del materiale di costruzione dei rivetti è conforme alle norme JIS G 3507, filetti metallici d'acciaio al carbonio SWRCH 12A.

*The composition of the material used to construct the cages conforms to JIS G 3141 norms; the cages are constructed with carbon rolled steel sheets, cooled and pressed SPCC.*

*The composition of the material used to construct the rivets conforms to JIS G 3507 norms, metal threads of carbon steel SWRCH 12A.*

**2.3**

**MATERIALE DEL CORPO**  
*HOUSING MATERIAL*

La composizione del materiale di costruzione delle fusioni dei supporti è HT 200 JIS G 5501 (ghisa) e le proprietà meccaniche sono illustrate nella tabella che segue:

*The composition of the construction material used to fuse the housings is HT 200 JIS G 5501 (cast iron), the mechanical properties of which are illustrated in the following table:*

Proprietà meccaniche delle fusioni in ghisa HT200 - *Mechanical properties of cast iron HT 200*

Classificazione Class	Spessore Thickness	Diametro della barra di prova Diameter of testing bar	Test di tensione Tension test	Test di frenatura laterale Traverse breaking test		Resistenza alla pressione Pressure strength	Test di durezza Hardness test

2.4

MATERIALI DEGLI ALTRI COMPONENTI

OTHER COMPONENTS MATERIAL

Nella sotto indicata tabella vengono indicati quelli che sono i principali materiali utilizzati nella costruzione dei principali accessori relativi ai supporti.

The principle materials used to construct the main accessories relative to the housings are indicated in the table below.

Componenti Components	Materiale utilizzato Material used	Simboli JIS JIS symbols	Numeri JIS JIS numbers
<b>Bussola</b> Adapter sleeve	<b>Acciaio al carbonio</b> Carbon steel	S25C	JIS G 4051
<b>Dado</b> Nut	<b>Acciaio al carbonio</b> Carbon steel	S25C	JIS G 4051
<b>Rosetta</b> Washer	<b>Lamine d'acciaio al carbonio rullate a freddo e pressate</b> Cold roller carbon steel sheet and strip	SPCC	JIS G 3141
<b>Anello di tenuta</b> Shaft seal	<b>Gomma nitrilica sintetica</b> Synthetic nitrile rubber	-	-
<b>Dispositivo di lubrificazione</b> Slinger	<b>Lamine d'acciaio al carbonio rullate a freddo e pressate</b> Cold roller carbon steel sheet and strip	SPCC	JIS G 3141
<b>Vite esagonale</b> Hexagon set screw	<b>Acciaio nichelato con cromo e molibdeno</b> Nickel chromium molybdenum steel	SCM 435	JIS G 4105
<b>Chiave esagonale</b> Hexagon wrench key	<b>Acciaio nichelato con cromo e molibdeno</b> Nickel chromium molybdenum steel	SNCM 630	JIS G 4103
<b>Ingrassatore</b> Grease nipple	<b>Ottone</b> Brass	C 3604	JIS H 3250

I cuscinetti utilizzati nei supporti **ISB®** prevedono un sistema di tenuta su entrambi i lati, costituito dalla combinazione di una tenuta in gomma sintetica fissata sull'anello esterno, rinforzata in acciaio e con relativo labbro; mentre sull'anello interno viene fissato uno schermo che ruota insieme all'anello interno stesso. Questo sistema di protezione previene la fuoriuscita di grasso e l'infiltrazione d'agenti inquinanti. Oltre a quanto sopra riportato e come accennato brevemente al punto 2, possono essere utilizzati ulteriori dispositivi di protezione, come i coperchi. L'utilizzo in sinergia di entrambi i dispositivi di protezione è particolarmente indicato in quei casi dove si è in presenza di agenti esterni particolarmente aggressivi, polvere, liquidi vari o quando l'impiego avviene in ambiente esterno.

*The bearings used in **ISB®** housings provide a sealing system on both sides.*

*They are constructed with a seal which has synthetic rubber fixed to the external ring and is reinforced with the relative steel lip; while fixed on the inner ring there is a shield which turns together. This protective system prevents grease from exiting and pollutants from entering.*

*In addition to what is reported above and as briefly mentioned in point n°2., ulterior protection devices such as covers are available. Both protection devices used at the same time is indicated in cases where the external agents are particularly aggressive such as dust, various liquids or for external use.*

Le tolleranze dei cuscinetti e dei supporti sono state normalizzate a livello sia nazionale che internazionale in conformità alle norme JIS. I cuscinetti vengono in genere costruiti in classe di tolleranza standard

*The tolerances of the bearings and their housings have been normalized at both national and international levels and conform to JIS norms. Generally, the bearings are constructed according to standard tolerances.*

### 3.5 TOLLERANZE DEGLI ALBERI SHAFTS TOLERANCES

Le tolleranze degli alberi, sono influenzate e determinate principalmente da due fattori; il diametro ed il numero dei giri che devono compiere. Nel caso l'albero preveda un impiego con un numero di giri basso, si possono utilizzare tolleranze h 9, mentre nei casi in cui gli alberi devono compiere molti giri è preferibile utilizzare tolleranze più ristrette.

The tolerances of the shafts are influenced and determined mainly by two factors: the diameter and the number of rounds to be completed. Should the shaft require a low number of rounds, the tolerance can be h9, whereas, if the shaft requires a higher number of rounds it is preferable to use a more narrow tolerance.

### 3.8 CARICO AMMISSIBILE DEI SUPPORTI

#### ALLOWED LOAD BEARING UNITS

La capacità di carico dei supporti è determinata principalmente da due fattori:

- la forma
- la direzione del carico.

Visto che ogni supporto ha caratteristiche diverse nella forma, può risultare difficile calcolare le capacità di carico permesse. In tutti i casi è sempre opportuno prestare attenzione sulla direzione della forza applicata, che può essere verso il basso, verso l'alto, orizzontale o assiale.

The housing load is determined principally by two factors:

- the form
- the direction of the load

As each housing has different characteristics in different forms, it can be difficult to calculate the permitted load capacity. In any case, it is always helpful to consider the direction of the force applied. The direction can be upward, downward, horizontal or axial.

A/H/N Direzione verso il basso  
 B Direzione verso l'alto

### 3.9

## CARICO AMMISSIBILE DE SUPPORTI IN LAMIERA STAMPATA ALLOWED LOAD OF PRESSED STEEL HOUSINGS

### Suministros Industriales y Servicios

I supporti in lamiera stampata ISB® quando vengono sottoposti a dei carichi potrebbero presentare delle deformazioni. Tali deformazioni possono variare a seconda sia della direzione che dall'ammontare del carico stesso, inoltre anche la forma del supporto e lo spessore dei lamierini possono influire sull'entità delle deformazioni.

Da quanto sopra esposto si deduce che il carico ammissibile deve essere tale che la deformazione provocata, non pregiudichi la funzionalità del supporto stesso.

Il carico ammesso sarà approssimativamente 1/3 del valore di carico base in direzione radiale ed 1/3 del carico radiale permesso in direzione assiale.

*When the housings in sheets stamped ISB are subjected to loads, deformations could present themselves. Such deformations may vary according to the direction of the total load itself, furthermore, also the form of the housing or the thickness of the sheet can influence the entity of the deformations. From all of the above we can deduct that the allowable load should be such that the deformation provoked does not prejudice the functionality of the housing itself. The allowable load will be approximately 1/3 of the base load value in a radial direction and 1/3 of the radial load permitted in axial direction*

### 3.10

## COEFFICIENTI DI SICUREZZA

### SAFETY FACTOR

Prima dell'impiego di un supporto è necessario determinare l'intensità e la direzione del carico tenendo conto dei relativi fattori di sicurezza. Per stabilire il carico ammissibile bisogna dividere il valore del carico statico di rottura per il fattore di sicurezza.

*Before using a housing unit it is necessary to determine the intensity and direction of the load considering the pertinent factor of security. To establish the admissible load it is necessary to divide the value of static load by the security factor.*

### 4 COEFFICIENTI DI CARICO E DURATA

#### LOAD RATINGS AND LIFE

La durata dei cuscinetti volventi può essere definita come il numero di giri o di ore di funzionamento, che il cuscinetto è in grado di sopportare prima che compaiano i primi segni di fatica su uno degli anelli, sulla pista di rotolamento o sugli elementi volventi. Tali segnali d'affaticamento sono causati da ripetute sollecitazioni, che influenzano i materiali di composizione dei cuscinetti. Vi sono comunque altri fattori che possono influenzare la durata della vita di un cuscinetto, ad esempio, l'abrasione, la corrosione, il grippaggio, l'ossidazione, la ruggine.

*The life of rotating bearings can be defined as the number of rounds or by the functioning hours, that the bearing is capable of withstanding before showing the first signs of wear on one of the rings, on the rotating track or on the rotating elements. Such signs of wear are caused by repeated use and are influenced by the composition materials of the bearings.*

*There are in any case other factors that can influence the life of a bearing; for example, abrasion, corrosion, the binding, oxidation and rust.*

Questi tipi di problemi possono presentarsi per eventuali applicazioni non idonee, per un errato montaggio, per insufficiente o non avvenuta lubrificazione. I problemi sopra elencati, sono da considerarsi diversi dal cedimento dei materiali, in quanto potrebbero essere evitati con le dovute precauzioni. Ove si voglia tenere in considerazione solamente la fatica nelle superfici di lavoro del cuscinetto, si dovranno osservare le seguenti condizioni:

1. Le forze e le velocità tenute in considerazione per la valutazione del cuscinetto dovranno corrispondere a quelle riportate alle reali condizioni d'esercizio.
2. Durante l'intero periodo d'esercizio dovrà essere assicurata un'adeguata lubrificazione.
3. L'esperienza dimostra come il cedimento di molti cuscinetti sia da attribuirsi a cause diverse dalla fatica, quali: scelta di un cuscinetto di tipo inadeguato, difetti di funzionamento o di lubrificazione, presenza di particelle estranee nel cuscinetto, od altro.

La durata a fatica nominale di un singolo cuscinetto, o di una campionatura di cuscinetti identici e operanti a identiche condizioni di esercizio, consiste nella durata d'esercizio pari almeno ad un grado di affidabilità del 90%.

La durata media di un gruppo di cuscinetti è di molto superiore alla durata nominale.

La durata a fatica nominale è espressa con  $L_{10}$  (milioni di giri - coefficiente di carico dinamico) o  $L_{10h}$  (ore d'esercizio). La sotto indicata equazione, permette di calcolare la relazione tra la durata nominale, il coefficiente di carico dinamico ed il carico agente sul cuscinetto:

$$L_{10} = \left( \frac{C}{P} \right)^p$$

dove:

- $L_{10}$  durata nominale espressa  $10^6$  di giri  
**C** coefficiente di carico dinamico del cuscinetto, espresso in N  
**P** carico dinamico equivalente sul cuscinetto, espresso in N  
**p** esponente di durata dell'equazione, con i seguenti valori:  
**P=** 3 per i cuscinetti a sfere  
**p=**  $\frac{10}{3}$  per i cuscinetti a rulli

*These types of problems can present themselves due to eventual applications which are not fit or due to mounting errors or for insufficient or lack of lubrication. The above mentioned problems should be considered differently from problems with materials that yield because they can be avoided by the necessary precautions. Where one considers only the wear and tear on the working surface of the bearing, the following conditions should be observed:*

1. *The force and speed of the bearing as explained should correspond to the real conditions of the exercise in order to evaluate the bearing.*
2. *During the entire exercise period the adequate lubrication should be assured.*
3. *Experience has shown us that the yielding of many bearings can be attributed to causes other than wear and tear, such as: the choice of an adequate bearing, functional or lubrication defects, the presence of foreign particles in the bearing and other things.*

*The life at nominal wear of a single bearing or of a sampling of identical bearings and operating under identical conditions of exercise, consists in the length of the exercise equal to at least a 90% level of reliability. The average life of a group of bearings is well above the nominal life. The life at nominal wear and tear is expressed in  $L_{10}$  (millions of rounds) - the coefficient of a dynamic load) or  $L_{10h}$  (hours of exercise). The equation illustrated below calculates the relation between the nominal life and the coefficient of the dynamic load and the agent load on the bearing:*

where:

- $L_{10}$  the nominal life expresses  $10^6$  rounds  
**C** the coefficient of the dynamic load of the bearing, expressed in N  
**P** the dynamic load equivalent on the bearing, expressed in N  
**p** the exponent of the length of the equation with the following values:  
**P=** 3 for spherical bearings  
**p=**  $\frac{10}{3}$  for roller bearings

Per cuscinetti utilizzati a velocità costante, la durata a fatica nominale, espressa in ore di funzionamento, potrà essere calcolata con la presente equazione:

*For bearings used at constant speeds, the life at nominal wear and tear, expressed in functioning hours, can be calculated with the present equation:*

$$L_{10h} = \left( \frac{10^6}{n \cdot 60} \right) \left( \frac{C}{P} \right)^p$$

dove:

*where:*

**n** velocità di rotazione, espressa in giri/minuti

***n** the speed of rotation, expressed in rounds per minutes*

Nella determinazione delle dimensioni del cuscinetto è necessario basare i calcoli sulla durata a fatica nominale corrispondente all'effettivo impiego. Di solito questo dipende dal tipo di macchina, dalla durata richiesta e dai requisiti inerenti la sicurezza di funzionamento.

*In the determination of the dimensions of the bearing it is necessary to base the calculations on the life at nominal wear and tear corresponding to the effective use. Usually this depends on the type of machine, the life requested and on the inherent functioning safety.*

Le relazioni tra il regime di rotazione ed il fattore di velocità così come tra la durata nominale ed il fattore di durata sono esplicitati nella sotto riportata tabella.

*The relation between the rotation regime and the speed factor as well as the relation between the nominal life and the life factor are explained in the table below.*

## 4.1

## COEFFICIENTE DI CARICO STATICO $C_0$

### STATIC LOAD RATINGS $C_0$

Il coefficiente di carico statico  $C_0$  può essere considerato quando il cuscinetto è stazionario o sottoposto a rotazioni e/o oscillazioni particolarmente lente (inferiori a 10 giri max. per minuto), pertanto il coefficiente di carico statico non verrà determinato in funzione della fatica del materiale, ma in base alla deformazione permanente indotta in corrispondenza del punto di contatto tra la superficie volvente e la pista di rotolamento.

Per i cuscinetti radiali, il carico è espresso in direzione radiale, ed il punto di pressione tra i corpi volventi e le piste di rotolamento possono raggiungere i seguenti valori:

4 200 N/mm<sup>2</sup> per i cuscinetti a sfere

Nelle condizioni sopra indicate, il coefficiente di carico statico  $C_0$ , corrisponde approssimativamente alla deformazione dell'elemento volvente più caricato ed alla deformazione di una delle piste di rotolamento uguale a 1/10 000 del diametro del corpo volvente. Quanto sopra espresso è da considerarsi valido in condizioni normali d'impiego e la deformazione può essere tollerata, senza che l'efficienza di funzionamento sia pregiudicata.

*The static load coefficient  $C_0$  can be considered when the bearing is stationary or subject to rotation and or particularly slow oscillation (below 10 rounds max. per minute), therefore the coefficient of the static load will not be determined in function of the wear on the material, but based on the permanent deformation induced at the point of contact between the rotating surface and the rolling track.*

*As for radial bearings, the load is expressed in radial direction and the pressure point between the rotating bodies and the rolling track can reach the following values:*

*4 200 N/mm<sup>2</sup> per spherical bearings*

*In conditions indicated above, the coefficient of the static load  $C_0$ , corresponds approximately to the deformation of the rotating element plus the load and to the deformation of one of the rolling tracks equal to 1/10 000 of the diameter of the rotating body. All of the above can be considered valid in normal conditions of use and the deformation can be tolerated, without prejudicing the functioning efficiency.*

## 4.2

## COEFFICIENTE DI SICUREZZA STATICO $S_0$

### STATIC LOAD SAFETY FACTOR $S_0$

Per quanto sopra esposto, la capacità di carico statica, determina il valore che un cuscinetto è in grado di sopportare se sottoposto a carichi, ma in assenza o ridotta presenza di movimento. Questi carichi possono comunque creare delle deformazioni, a volte permanenti, per questo motivo è importante considerare il concetto di coefficiente di sicurezza del cuscinetto contro eventuali deformazioni.

Il coefficiente di sicurezza statico, può essere determinato attraverso la seguente formula:

$$S_0 = \frac{C_0}{P_0}$$

considerando che:

- $S_0$  - fattore di sicurezza statico
- $C_0$  - coefficiente di carico statico (Kg., N)
- $P_0$  - carico massimo ammissibile (Kg., N)

*For all of the above, the static load capacity, determines the value that a bearing is capable of supporting if subjected to loads, but in absence or in the reduced presence of movement. These loads can anyway create deformations, sometimes permanent, for this reason it is important to consider the concept of the safety factor of the bearing against eventual deformation.*

*The static safety factor can be determined using the following formula:*

*consider that:*

- $S_0$  - static safety factor
- $C_0$  - static load coefficient (Kg., N)
- $P_0$  - maximum load allowable (Kg., N)

Valori indicativi del coefficiente di sicurezza statico  $S_0$

*So static safety load rating coefficient*

<b>Elevata precisione di rotazione, con carichi ed urti</b> <i>High rotation precision, with heavy loads and impact</i>	2
<b>Precisione normale di rotazione, con maggiori esigenze di silenziosità</b> <i>Normal rotation precision, with greater need of noiselessness</i>	1
<b>Precisione di rotazione limitata, bassi carichi, minime esigenze di silenziosità</b> <i>Low rotation precision, low loads and minimal need of noiselessness</i>	0,5

### 4.3

## CARICO RADIALE DINAMICO E STATICO EQUIVALENTE

### EQUIVALENT RADIAL DYNAMIC AND STATIC LOAD

Nelle tabelle dimensionali, vengono indicati i valori dei coefficienti di carico dinamico  $C_r$  e statico  $C_{or}$ . Questi valori sono da considerarsi solamente quando il carico è puramente in direzione radiale; però i cuscinetti spesso sono soggetti a più carichi agenti, nonché ad altre situazioni, quali urti, vibrazioni ecc... pertanto occorre convertire il valore del carico dinamico radiale ed assiale in un unico valore chiamato carico radiale dinamico equivalente, per ottenere così i reali carichi applicati sui cuscinetti ed ottenere un valore molto simile alla durata del cuscinetto montato sul supporto. Il carico radiale statico rappresenta la controparte del carico radiale dinamico equivalente di un cuscinetto volvente.

*The dynamic  $C_r$  and static  $C_{or}$  load coefficient ratings are listed in the dimension tables. These ratings should be considered only when the load is purely in the radial direction; however, the bearings are often subject to several load agents, as well as other situations such as bumps, vibration etc.. therefore, the ratings of the dynamic radial and axial load should be converted to the same rating called the dynamic radial load equivalent. In this way, the rating of the real applied load obtained is very similar to the life of the bearing mounted on the housing. The static radial load represents the counterpart to the dynamic radial load equivalent of a bearing.*

### 5

## GIUOCO DEI CUSCINETTI A SFERE

### CLEARANCE OF BALL BEARINGS

Uno dei principali fattori che può influenzare la durata del cuscinetto è il giuoco. Il giuoco del cuscinetto o giuoco interno (giuoco iniziale) rappresenta il valore di un cuscinetto prima di venir montato su di un albero o all'interno della sede d'alloggiamento. Il giuoco di un cuscinetto può essere inteso sia in senso radiale che assiale, quando lo spostamento dell'anello libero è in senso radiale si parlerà di giuoco radiale, mentre se il movimento è assiale, si parlerà di giuoco assiale del cuscinetto. Il giuoco radiale è determinato come il valore medio di varie misure dello spostamento totale sul piano perpendicolare all'asse del cuscinetto. Tale spostamento è tipico di uno degli anelli del cuscinetto (l'altro è fisso) durante il rotolamento in varie direzioni angolari, sia rispetto all'anello

*One of the principal factors that can influence the life of a bearing is the clearance. The clearance of the bearing or the internal clearance (initial clearance) represents the rating of a bearing before mounting it on a shaft or inside of the housing case. The clearance of a bearing can be intended both in a radial sense as well as an axial sense when the movement of the free ring is in the radial sense we say radial clearance while we say axial clearance if the movement is axial. The radial clearance determines the average rating of the various measurements of the total movement on a plain which is perpendicular to the axis of the bearing. Such movement is typical of one of the rings of the bearing (the other is fixed) during the rolling in various angular directions both with respect to the*

rotante che a quello fisso e a diverse posizioni angolari della serie di sfere, rispetto agli anelli stessi.

Visti i diversi coefficienti di giuoco richiesti, i cuscinetti radiali possono essere costruiti secondo vari gruppi di giuoco iniziale. Di norma, i cuscinetti a sfere sono costruiti con giuoco radiale normale CN, che, ad impieghi comuni alla maggior parte dei casi, forniscono parametri soddisfacenti di funzionamento. Il giuoco radiale viene evidenziato con l'aggiunta alla sigla del cuscinetto della designazione della classe di precisione (C2, C3, C4, C5), mentre ai cuscinetti costruiti con un giuoco radiale corrispondente al gruppo normale CN non vengono assegnate ulteriori designazioni convenzionali. La durata della vita di un cuscinetto, può essere influenzata da diversi fattori, quali gli accoppiamenti di montaggio, le eventuali differenze di temperature tra l'anello interno e l'anello esterno ecc... da questo si deduce che la scelta del giuoco del cuscinetto è un fattore estremamente importante, perché oltre a determinarne la durata, influisce anche sulla rumorosità, sulle vibrazioni, sulla produzione di calore del cuscinetto. Il giuoco del cuscinetto deve garantirne un buon funzionamento, in particolar modo nel momento in cui potrebbero presentarsi delle contrazioni dell'anello esterno od interno, a seconda dell'applicazione. Le tabelle seguenti forniscono i valori di giuoco radiale.

*rotating ring and with respect to the fixed ring and the different angular positions of the series of spheres with respect to the rings themselves.*

*Considering the different coefficients of clearance required, the radial bearings can be constructed according to various initial groups.*

*As a norm, spherical bearings are constructed with a normal CN radial clearance that with common use in the majority of cases, supply satisfying functioning parameters. Radial clearance is indicated by an acronym on the bearing with the designation of the precision class (C2, C3, C4, C5), while the bearings constructed with a radial clearance corresponding to the normal group CN are not assigned an ulterior conventional designation.*

*The life of a bearing can be influenced by different factors accompanied by the mounting and eventual temperature differences between the internal and external ring etc...*

*From this we deduce that the choice of the clearance of the bearing is an extremely important factor because besides determining the length, it influences the noiselessness, the vibration, the production of heat.*

*The clearance, of the bearing must guarantee good functioning, in particular, at the moment in which contractions of the external or internal ring may be present depending upon the application.*

*The following table supplies radial clearance ratings.*

## 5.1

### TIPOLOGIA GIUOCO RADIALE

### TYPES OF RADIAL CLEARANCE

<b>Giuoco Clearance</b>	<b>Significato Meaning</b>	<b>Possibili condizioni operative Possible working conditions</b>
<b>C2</b>	<b>Giuoco radiale dei cuscinetti inferiore a CN</b> Radial clearance of bearings lower than CN	<b>Riduzione rumorosità e vibrazioni</b> Reduction of noisiness and vibrations
<b>CN</b>	<b>Giuoco radiale dei cuscinetti normale</b> Normal radial clearance of bearings	<b>Condizioni normali</b> Normal conditions
<b>C3</b>	<b>Giuoco radiale dei cuscinetti superiore a CN</b> Radial clearance of bearings higher than CN	<b>Montaggio con interferenze su entrambi gli anelli</b> Assembling with interferences on both rings
<b>C4</b>	<b>Giuoco radiale dei cuscinetti superiore a C3</b> Radial clearance of bearings higher than C3	<b>Errori di montaggio, albero e anello interno riscaldati</b> Assembling mistakes, shaft and inner rings heated
<b>C5</b>	<b>Giuoco radiale dei cuscinetti superiore a C4</b> Radial clearance of bearings higher than C4	<b>Albero riscaldato e alloggiamento raffreddato</b> Heated shaft and cooled housing

Cuscinetti con foro cilindrico e conico - *Cylindrical and conical bore bearings*

Il processo di lubrificazione, ha il compito principale di evitare che vi possa essere eccessivo attrito tra le sfere, le piste di rotolamento e le gabbie, ridurre entro certi limiti la rumorosità di funzionamento, assicurare ai cuscinetti protezione dalla corrosione, oltre a diminuire anche l'eventuale attrito delle tenute. I supporti **ISB®** sono lubrificati con grassi che mantengono le proprie caratteristiche nel tempo, in condizioni normali d'esercizio. Qualora le condizioni d'esercizio lo richiedessero (condizioni esterne sfavorevoli, innalzamento della temperatura, aumento dei giri del cuscinetto), bisognerebbe procedere con ulteriori lubrificazioni, per consentire al cuscinetto di operare sempre nelle condizioni più favorevoli. Le tabelle riportate a seguito indicano quelli che sono i valori orientativi per i periodi di lubrificazione dei supporti ri-lubrificabili. Occorre precisare che esistono anche dei supporti esenti da manutenzione, di seguito esplicitati.

*The lubrication process is meant principally to avoid excessive wear between the sphere, the rolling track and the cage to reduce to certain limits the noise level of functioning, assure the protection of the bearing against corrosion and furthermore to diminish eventual wear from the seal. **ISB®** housings are lubricated with grease that maintains its characteristics over time during normal exercise conditions.*

*When conditions require (external unfavourable conditions, increased temperature, increased rounds of the bearing), an ulterior greasing should be done in order to permit the bearing to always operate in more favourable conditions. The following table indicates what the guideline ratings are for the periods of lubrication of housings which can be lubricated again. We should note that some housings exist which do not require maintenance and this is explained as follows.*

6.1

SUPPORTI ESENTI DA MANUTENZIONE  
MAINTENANCE-FREE BEARING UNITS

Suministros Industriales y Servicios

I supporti **ISB®** esenti da manutenzione, sono pronti al montaggio. I cuscinetti utilizzati in questo tipo di supporto contengono una tipologia di grasso d'elevata qualità, a base di litio saponificato, che ne consente un funzionamento continuo a temperature che possono variare dai -30°C a +110°C. Il sistema di tenuta garantisce ai cuscinetti di essere perfettamente protetti da eventuali agenti esterni inquinanti (polvere, umidità, fluidi vari) e di prevenire la fuoriuscita del grasso. La rotazione stessa dell'albero consente la circolazione del grasso e la lubrificazione stessa all'interno del cuscinetto si mantiene per un lungo periodo. I principali vantaggi nell'utilizzo di supporti esenti da manutenzione sono raggruppabili con quanto sotto riportato:

*ISB® housings which are exempt from maintenance are units which are ready to be mounted. The bearings used in this type of housing contain a high quality type of grease made of saponified lithium which allows the functioning to continue at temperatures which vary from -30°C to +110°C. The sealing system guarantees that the bearings are perfectly protected from eventual external pollutants (dust, humidity, various fluids) and it prevents the grease from exiting. The rotation of the shaft itself permits the grease to circulate and the lubrication itself inside the bearing maintains itself for a long period. The main advantages of using these housings is that they are exempt for maintenance and are regrouped as reported below:*

- maggior resistenza ad eventuali infiltrazioni d'agenti inquinanti esterni
- mancanza di dispersioni del grasso utilizzato per la lubrificazione
- unità compatta, perché non vi sono dispositivi di lubrificazione
- risparmio in termini di tempo e costi di manutenzione

- *increased resistance to eventual infiltration from pollutants*
- *no dispersion of grease used to lubricate*
- *compact units because there are no lubrication devices*
- *savings in terms of time and the expense of maintenance*

## 6.2 SUPPORTI RI-LUBRIFICABILI

### RE-GREASEABLE BEARING UNITS

I supporti **ISB®** nelle versioni in ghisa ed in acciaio inox possono essere forniti con apposito ingrassatore che consente periodicamente d'effettuare la ri-lubrificazione del cuscinetto. Il foro dove è posizionato l'ingrassatore può creare un indebolimento della struttura del supporto, anche se da studi effettuati, la posizione del foro è posta in modo tale da rendere minimo l'effetto sopra citato. In condizioni normali è preferibile l'utilizzo di supporti esenti da manutenzione, anche se vi sono comunque applicazioni dove risulta indispensabile l'utilizzo di supporti ri-lubrificabili, come nei casi citati di seguito:

- utilizzo in condizioni estremamente critiche, ove non sia possibile l'utilizzo di ulteriori dispositivi di chiusura (coperchi di protezione)
- utilizzo su macchinari che lavorano ad intermittenza e dove sono presenti agenti inquinanti esterni
- utilizzo in casi dove la rotazione risulta elevata e si possono avere problemi di rumorosità
- utilizzo del supporto con temperature superiori ai +140°C

In condizioni normali d'utilizzo dei supporti **ISB®** la quantità di grasso presente nel cuscinetto è sufficiente per tutta la durata della vita del supporto. Con il verificarsi di condizioni esterne sfavorevoli, come elevate variazioni termiche, numero di giri più elevati, sarà indispensabile valutare adeguatamente questi fattori perché possono notevolmente influire sugli intervalli di lubrificazione.

*The **ISB®** housing units in the cast iron version and in the stainless steel version can be supplied with the necessary lubricator which permits periodic re-greasing of the bearings. The bore where the greaser is positioned can create a weakness in the structure of the housing, even if studies performed, the position of the bore is located in such a way as to render the effects of the above mentioned minimal. In normal conditions it is preferable to use housings which are exempt from maintenance. Even so, there are, in any case, some applications where the use of re-grease bearings is indispensable, as in the case cited below:*

- *use in extremely critical conditions, where it is not possible to use ulterior closure devices (protective covers)*
- *use on machines that work at intermittence and where external pollutant agents are present.*
- *use in cases where the number of rotations are elevated and there may be noise problems.*
- *use when temperatures are above +140°C.*

***ISB®** housing units used in normal conditions, contain a quality grease inside the bearing which is sufficient for all of the life of the bearing. As unfavourable external conditions such as elevated thermal variations, the number of rounds increased, are verified it will be indispensable to evaluate adequately these factors because they can notably influence the lubrication intervals.*

## 6.3 PERIODICITÀ DELLA LUBRIFICAZIONE

### PERIODICITY OF LUBRICATION

I valori, riportati nella sotto indicata tabella, sono relativi agli intervalli di lubrificazione, per un funzionamento approssimativo di 8 ore giornaliere.

*The ratings, indicated in the table below, are relative to the intervals of lubrication for functioning approximately 8 hours per day.*

Temperatura Temperature	Condizioni d'impiego - Working conditions			Cuscinetto Bearing	Grasso Grease
	Ordinarie Normal	Polvere Dust	Polvere ed umidità Dust and damp		
50°C ➤ 50°C 70°C ➤ 70°C 70°C ➤ 100°C	360/720 giorni/days 360 giorni/days 180 giorni/days	360 giorni/days 120 giorni/days 60 giorni/days	120 giorni/days 30 giorni/days 15 giorni/days	Normale Normal	Litio Lithium
100°C ➤ 120°C 120°C ➤ 150°C	60 giorni/days 15 giorni/days	15 giorni/days 5 giorni/days	5 giorni/days 2 giorni/days	Termoresistente Heat-resistant	Calcio Calcium
150°C ➤ 180°C 180°C ➤ 200°C	7 giorni/days 3 giorni/days	2 giorni/days 1 giorno/day	1 giorno/day 1 giorno/day	Termoresistente Heat-resistant	Speciale Special

I supporti possono essere ri-lubrificati attraverso l'apposito ingrassatore (tipo a sfera), che si trova sulla parte esterna del supporto. Il grasso viene inserito gradualmente nell'ingrassatore (1) ed attraverso un canaletto (2) che si trova nella parte interna del supporto raggiunge due fori (3) che permettono l'ingresso del grasso nel cuscinetto. Si prega di prestare sempre molta attenzione a quanto segue:

- evitare l'ingrassaggio al primo montaggio
- non utilizzare mai olio per la lubrificazione
- utilizzare sempre il grasso raccomandato
- pulire bene l'ingrassatore da eventuali impurità
- inserire il grasso in maniera graduale e lenta, facendo possibilmente ruotare l'albero
- non introdurre mai quantità eccessive di grasso (potrebbe comprometterne il funzionamento)
- se il cuscinetto è stato smontato, prestare particolare attenzione a quando viene rimontato, in modo tale che la parte prolungata dell'anello interno sporgente (4) sia dallo stesso lato dell'ingrassatore, perché solo in questa posizione è possibile la ri-lubrificazione del supporto.

*The housings can be re-lubricated using the greaser supplied for that purpose (sphere type), which can be found on the external part of the housing. The grease is inserted gradually in the greaser (1) and using the small canal (2) which can be found in the internal part of the housing, reach two holes (3) which permit the entry of the grease into the bearing. We recommend that careful attention be given to the following:*

- *avoid using grease when first mounting*
- *do not ever use oil to lubricate*
- *always use the grease recommended*
- *clean the greasing tool well from eventual impurities*
- *insert the grease in a gradual and slow manner making the shaft rotate if possible*
- *never introduce excessive quantities of grease (they could compromise the functioning)*
- *if the bearing has been dismantled, give careful attention to remounting so that the prolonged part of the internal ring which sticks out (4) is from the same side as the greaser because this is the only position in which it is possible to re-lubricate the housing*

## 6.5

## QUANTITÀ DI GRASSO

### GREASE QUANTITY

Normalmente i cuscinetti per supporti **ISB®** sono riempiti circa al 30-35%, percentuale adatta per la maggior parte delle applicazioni più comuni. Se i cuscinetti fossero riempiti con una quantità maggiore, questo provocherebbe una fuoriuscita del grasso, ed anche in virtù della resistenza che si verrebbe a creare, ci sarebbe un effetto di surriscaldamento. Nelle lubrificazioni periodiche si consiglia di attenersi quanto più alla quantità di grasso indicata nella sotto riportata tabella. Per impieghi a basse velocità i valori riportati in tabella possono anche aumentare, non oltre il doppio di quanto indicato.

*Normally the bearings for the **ISB®** housings are filled to 30-35%, the suitable percentage for most common applications.*

*If the bearings were to be filled with a larger quantity, this would provoke the grease to overflow and also with resistance that would be created there would be an overheating effect.*

*When lubricating periodically, it is advisable to use the quantities of grease indicated in the table below.*

*For low speed uses, the values in the table can even increase but not more than double the amount indicated.*

INGRASSATORI

GREASE NIPPLE

In linea di massima, quasi tutti i supporti **ISB**<sup>®</sup> sono forniti con apposito ingrassatore in ottone, tipo standard (su richiesta anche zincato o in acciaio inox). Per poter effettuare l'ingrassaggio, sarà necessario utilizzare l'apposito attrezzo. Qualora vi fossero delle necessità particolari d'applicazione è possibile fornire anche altri tipi di ingrassatori, come riportato nei seguenti disegni.

Most **ISB**<sup>®</sup> housings are furnished with the right grease nipple in brass as a standard type (upon request also zinc or stainless steel plated) In order to carry out greasing, it will be necessary to use the proper tool. Should there be necessity for a particular application it is possible to supply other types of grease nipple as can be seen in the following diagrams.

Ottone - Zincati - Acciaio inox  
Brass - Galvanized - Stainless steel

Tipo standard - Standard type

Disponibile solo su richiesta - Available on request

## 6.7

## TABELLA DEI LUBRIFICANTI

### TABLES OF LUBRICANTS

I lubrificanti per cuscinetti utilizzati nei supporti ISB®, dovranno rispondere ai seguenti requisiti:

- essere stabili, sia a livello fisico che chimico
- essere privi di corpi estranei provenienti da componenti meccanici (quali abrasivi, sostanze metalliche ecc...)
- garantire un coefficiente minimo d'attrito
- avere una buona capacità lubrificante

La seguente tabella, esplica quelli che sono i lubrificanti comunemente utilizzati nonché le loro principali caratteristiche.

The lubricants for bearings used in ISB® housings should respond to the following requirements:

- be stable, both on a physical as well as a chemical level
- be exempt foreign bodies originating from mechanical components (abrasives, metallic substances etc...)
- guarantee a minimum coefficient of rubbing
- have a good lubricating capacity

The following table explains which are the common lubricants used as well as their principle characteristics.

Marca e tipo Brand name	Grasso base Basic type grease	Temperatura d'esercizio Operating temperature	Caratteristiche Characteristics
<b>Exxon Beacon 325</b>	Grasso sintetico Synthetic grease	-55 > +120°C	Grasso generico General grease
<b>Chevron SRI-2</b>	Grasso minerale Mineral grease	-35 > +180°C	Indicato alle alte temperature con buona resistenza all'acqua High temperature range with good water resistance
<b>Shell Alvania 2</b>	Grasso minerale Mineral grease	-35 > +120°C	Lunga durata Long life
<b>DuPont Krytox 240AC (Mil-G-27617)</b>	Grasso fluorato Fluorinate grease	-35 > +290°C	Indicato per altissime temperature. Non perde le proprietà lubrificanti (costo elevato) High temperature stability with good lubricating properties and (very high price)
<b>Shell Dolium R</b>	Grasso di petrolio Petroleum grease	-40 > +150°C	Resistente alla corrosione ed all'acqua Good corrosion resistance and water washout properties
<b>KYODO SRL</b>	Grasso sintetico Synthetic grease	-40 > +150°C	Bassa rumorosità e bassi carichi Low noise and low torque applications
<b>Mobil HP</b>	Litio Lithium complex	-30 > +110°C	Resistente alla corrosione ed alle vibrazioni, velocità moderate Vibration, moderate speeds and good corrosion resistance

I supporti **ISB**® normalmente vengono forniti già montati e solitamente confezionati singolarmente. Occorre prestare attenzione nel momento dell'apertura della confezione, che non vadano persi eventuali accessori aggiunti, come ad esempio chiavi ed ingrassatori. I supporti **ISB**® sono agevolmente montabili fin dall'inizio, occorre comunque prestare attenzione a quanto sotto riportato, per consentire al supporto di avere una normale vita d'esercizio:

- assicurarsi che la superficie dove viene montato il supporto sia sufficientemente rigida e piana
- evitare disallineamenti oltre i  $\pm 2^\circ$  tra la superficie dove viene montato il supporto e l'asse dell'albero

*ISB® bearing units are normally furnished already mounted and singularly packaged. Care should be taken while opening the package so that eventual added accessories such as keys and grease nipple are not lost.*

*ISB® bearing units are easily to mount without prior know how, it is however important to give attention to the following points in order to have a normal live span of the unit:*

- *ascertain that the surface where the unit will be mounted is sufficiently rigid and flat.*
- *avoid misalignments outside of  $\pm 2^\circ$  between the surface where the unit is to be mounted and the axis of the shaft.*

**7.1**
**FISSAGGIO CON GRANI**
**SETSCREWS FIXING**

Il fissaggio del cuscinetto all'albero avviene attraverso l'avvitamento di due grani che si trovano sulla superficie del cuscinetto stesso (fig. A). Per razionalizzare tale operazione è consigliabile effettuare quanto segue: appiattire leggermente l'albero nella zona del grano di fissaggio (fig. 1) oppure ricavare un leggero incavo (fig. 2). Nel caso si proceda con l'incavo occorre prestare molta attenzione affinché non vi siano spostamenti assiali che possano deformare il cuscinetto. I grani di fissaggio dovrebbero essere serrati il più possibile, in modo da evitare qualsiasi spostamento dell'anello interno sull'albero. **Si raccomanda di non stringere eccessivamente i grani**, che potrebbero causare una deformazione dell'anello interno, con conseguente deformazione dello stesso e causare uno scorrimento non uniforme. I grani di fissaggio andranno montati seguendo i valori indicati nelle sotto riportate tabelle. Se il cuscinetto dovesse essere soggetto a forti oscillazioni o carichi assiali, è consigliabile ricavare sull'albero uno spallamento (fig. 3) in modo tale da bloccare l'anello interno con un dado contro lo spallamento stesso.

*The fixing of the bearing to the shaft takes place using setscrews that are located on the surface of the bearing itself (fig. A). To realize such an operation it is advisable to do the following:*

*flatten slightly the shaft in the zone where the setscrew will be fixed (fig. 1) or hollow out a small cavity (fig. 2). In the case of the cavity, be very careful that there are no axial movements that could deform the bearing.*

*The setscrews should be tightened as much as possible in such a way as to avoid movement of the ring inside the shaft.*

**We recommend however not to over tighten or tighten excessively the setscrews** however as they could cause a deformation of the internal ring with consequent deformation of the bearing and cause non uniform running.

*The setscrews will be mounted according to the values indicated on the table below. If the bearing should be subject to strong oscillations or axial loads, it is advisable to hollow out a support to the shaft in such a way as to block the internal ring with a nut against the support itself.*

FISSAGGIO CON BUSSOLA DI TRAZIONE

TAPER ADAPTER FIXING

Quando si vuole procedere al montaggio della bussola di trazione, occorre posizionare il supporto su di una superficie, perfettamente piana (è consigliabile lasciare i bulloni di fissaggio leggermente allentati, per poi stringerli ad operazione avvenuta). Introdurre la bussola in modo tale che la parte conica si trovi quasi al centro del cuscinetto e battere leggermente con un attrezzo, l'intera superficie laterale della bussola. Procedere con l'inserimento della rondella e stringere a fondo la ghiera con apposita chiave. **Si raccomanda di non stringere troppo la ghiera**, perché potrebbero causarsi delle deformazioni, pertanto attenersi ai valori sotto indicati. Al termine delle operazioni sopra elencate, provare la rotazione manuale dell'albero e verificare che ruoti agevolmente.

Once ready to proceed with the mounting of the taper adapter, it is necessary to position the support on a perfectly flat surface (it's a good idea to leave the fixing bolts slightly loose and then tighten them once the operation is complete). Introduce the taper adapter with the conical part nearly at the centre of the bearing and with a tool, hit the entire lateral surface of the bolt lightly. Proceed to insert the washer and tighten completely the ferrule/ring with the proper key.

**Attention: over tightening the ferrule could cause deformations** therefore, stay within the values indicated below. At the end of the operation mentioned above, try to manually rotate the shaft and verify that it rotates with ease.

### 7.3

### FISSAGGIO CON ANELLO ECCENTRICO DI SERRAGGIO ECCENTRIC COLLAR LOCKING FIXING

Un altro sistema utilizzabile per il fissaggio tra il cuscinetto e l'albero, può avvenire attraverso l'utilizzo di un anello eccentrico di serraggio. In questo caso l'albero e l'anello interno verranno collegati proprio serrando l'anello eccentrico nel senso di rotazione dell'albero. Nel montaggio del supporto con anello eccentrico di serraggio, assicurarsi di compiere correttamente le seguenti operazioni; accertarsi che la superficie dove verrà installato il supporto sia idonea per quell'applicazione; verificare che l'estremità dell'albero sia priva di bave e che la vite di bloccaggio dell'anello eccentrico non fuoriesca dalla parte dell'albero; assicurarsi che il supporto sia ben bloccato alla superficie e che non vi siano possibilità di carichi assiali eccessivi; inserire l'anello eccentrico facendolo girare nel senso di rotazione e con apposito strumento battere in modo da fissare l'anello eccentrico; al termine di queste operazioni serrare la vite di bloccaggio presente sul collare attenendosi ai valori riportati nelle sotto indicate tabelle. Questo sistema di fissaggio non è particolarmente indicato per applicazioni nelle quali gli alberi possono variare il senso di rotazione.

*Another system that can be used to fix the bearing and the shaft is to use the eccentric collar locking system.*

*In this case the shaft and the internal ring actually linked by tightening the eccentric ring in the rotation direction of the shaft. When mounting the eccentric collar locking system support, be sure to correctly perform the task; ascertain that the surface where it will be installed is fit for this application; verify that the edge of the shaft has no metal burr and that the blocking screws of the eccentric ring does not protrude out of the shaft; make sure that the support is securely fastened to the surface and that there is no possibility for excessive axial loads.*

*Insert the eccentric ring by turning, in the rotation direction, and with the proper tool, strike it so as to fix the eccentric ring.*

*At the end of this operation, tighten the blocking screw present on the collar staying within the limits indicated on the table below. This fixing system is not particularly indicated for applications in which the shafts can rotate in different directions.*

## 7.4

# MOVIMENTO ASSIALE DOVUTO ALL'ESPANSIONE O AL RISTRINGIMENTO

## AXIAL MOVEMENT DUE TO EXPANSION AND SHRINKAGE

Succede spesso che in presenza di alcune particolari condizioni di lavoro, l'albero si possa espandere o restringere, e che quindi il cuscinetto si possa muovere.

L'albero della ruota del camion per esempio (mozzo), deve essere mosso in direzione assiale al limite: quando l'albero viene utilizzato a temperature elevate, l'espansione termica fa sì che lo stesso diventi più largo e lungo.

Se i cuscinetti sono tutti fissati sull'albero si verifica sul cuscinetto un carico assiale straordinario, e anche a causa dell'espansione termica potrebbe verificarsi una rottura del cuscinetto stesso.

Per questa ragione, in presenza di espansioni o restringimenti dell'albero bisogna utilizzare un supporto fisso da un lato e uno mobile dall'altro.

It often happens that in the presence of some particular working conditions, the shaft may expand or shrink and therefore the bearings may move.

The shaft of the wheels of a truck for example, should be moved in the axial direction to the limit: when the shaft is used at high temperatures, thermal expansion takes place and the shaft becomes wider and longer.

If the bearings are all attached to the shaft the bearing will be have an extraordinary axial load and could even break due to the thermal expansion.

This is why, in the presence of an expanding or shrinking shaft, fixed support on one side or a mobile one from the other should be used.

Fig. 1

Fig.1) Come mostrato, è consigliabile utilizzare il tipo di supporto a cartuccia con cuscinetto avente diametro esterno cilindrico, nella stessa maniera che con i soliti cuscinetti. Quando si utilizzano supporti a cartuccia, bisogna prestare attenzione a non causare una deformazione nel momento dell'inserimento. Tutto il corpo della struttura come sopra mostrato, è preparato per essere utilizzato con alte temperature.

Fig. 2

Fig.2) Ad ogni modo la chiave è lavorata sull'albero, e generalmente al posto dei grani di fissaggio viene utilizzata una vite a testa esagonale. Il movimento assiale causato dall'espansione o dal restringimento dell'albero è regolato da questo.

Fig.1) As shown it is desirable to use a cartridge type bearing with a cylindrical outer diameter in the same manner as with ordinary bearings. When using cartridge type housings, be careful not to cause a deformation at the time of insertion. The complete housing with the above shown structure is prepared for use at high temperatures.

Fig.2) The key is machined on the shaft and a dog point hexagon hollow setscrew is generally used in place of the setscrew. Axial movement due to shaft expansion and shrinkage is in this way regulated.

## 7.5

### SMONTAGGIO DEL SUPPORTO

#### DISASSEMBLY OF BEARING UNIT

Se per una qualsiasi ragione, si rende necessaria la sostituzione del supporto, occorre ripercorrere le stesse operazioni che si erano effettuate per il montaggio, ma al contrario. È importante prestare attenzione particolare ai seguenti aspetti:

- nel caso il supporto sia stato fissato con i grani di bloccaggio, è importante svitare completamente gli stessi, in modo tale da evitare che nel momento dello smontaggio, i grani non possano in alcun modo strisciare sull'albero segnandolo
- nel caso il supporto sia stato utilizzato con bussola di trazione, occorre sollevare la linguetta della rondella e svitare leggermente la ghiera, dopodiché appoggiando un anello, battere con apposito attrezzo su tutta la superficie della ghiera, fin tanto che non si può estrarre la bussola. Fare molta attenzione a non danneggiare le filettature.

If for any reason, it becomes necessary to substitute the housing, the same operation as was done while mounting must be carried out, but in reverse. Give careful attention to the following aspects:

- If the housing had been fixed with setscrews, it is important to unscrew them completely to keep them from sliding against the shaft while dismantling.
- If the taper adapter has been used to fix the housing, lift the lip of the washer and unscrew slightly the lock nut then while supporting the ring, strike with the proper tool on the surface of the lock nut until the taper adapter can be extracted. Be very careful not to damage the threading.

## 7.6

### SOSTITUZIONE DEL CUSCINETTO

#### BEARING REPLACEMENT

Se per una qualsiasi ragione, si rendesse necessario sostituire il cuscinetto presente all'interno del supporto, questo non significa che debba essere sostituito anche il corpo del supporto. Per effettuare tale operazione occorre che le viti di bloccaggio siano ben fissate, per non interferire nelle operazioni di sostituzione. Utilizzando un tubo o un attrezzo simile, ed inserendolo all'interno del foro del cuscinetto, quest'ultimo dovrà essere fatto ruotare di circa 90° facendo in modo di estrarlo dalle guide ricavate all'interno della fusione del supporto; dopodiché si procederà nell'operazione inversa per inserire il nuovo cuscinetto.

If for any reason it becomes necessary to substitute the internal bearing of the housing, this does not mean that the housing must also be substituted. To do such an operation the blockage screws are well fixed so as not to interfere with the substitution operation. Using a tube or a similar tool and inserting it inside the bore in the bearing and rotating the bearing about 90° in such a way as to extract it from the guide hollowed out inside the casting of the housing; after which proceed inversely to insert the new bearing.

La tabella sopra riportata può essere utilizzata quale riferimento generale per l'intercambiabilità dei supporti e cuscinetti ISB® rispetto ad altre marche. Si raccomanda sempre di verificare con attenzione le dimensioni dei prodotti ISB® rispetto agli stessi articoli di altre marche; alcuni hanno identiche dimensioni, mentre altri possono avere dimensioni diverse. I cuscinetti della serie pesante non sono stati citati in questa tabella, ma sono comunque disponibili per le serie: UCP - UCF - UCFS - UCFL - UCT

The above table should be used as a cross reference for ISB® and other manufacturers of self-aligning bearing units. Please note that some dimensions of the ISB® brand may differ slightly from those of other manufacturers. Heavier duty Pillow Blocks have not been included in this cross reference table. Sizes available are: UCP - UCF - UCFS - UCFL - UCT.

I supporti **ISB** possono essere utilizzati non solamente in condizioni di normale temperatura, ma anche in applicazioni con elevate temperature.

Nei supporti **ISB** per Alta Temperatura (**HT**) viene impiegata una speciale tipologia di tenuta e di grasso, appositamente studiati per resistere oltre ai 100° C, come da tabella sotto riportata.

Nell'utilizzo ad elevata temperatura, è necessario considerare che i supporti presentano un calo del carico massimo ammissibile, e un incremento del giuoco radiale rispetto alle normali condizioni d'impiego.

Lo standard di riferimento per il giuoco radiale dei cuscinetti montati in questi supporti è C5 sia per fori cilindrici che conici. In condizioni di elevato differenziale di temperatura tra l'anello interno e l'anello esterno del cuscinetto, occorre prevedere specifici giuochi radiali.

*ISB bearing units may be used not only in normal temperature conditions, but also in high temperature applications.*

*ISB bearing units for High Temperature (HT) use suitable kind of rubber seal and the grease for specific operating temperature as shown in the table reported below.*

*For heat resistance application, it must be taken in consideration the decrease of load rating of the bearings and a larger-than-normal radial internal clearance.*

*Standard radial internal clearances for High Temperature applications are C5 for both cylindrical and tapered bore bearings.*

*When temperature gap between the inner and the outer ring of the bearing is extremely large, suitable radial internal clearance must be determined.*

**Intervalli di impiego**
*Range of operating temperature*

Disponibile in acciaio inox Supporto: AISI 304 - Cuscinetto: AISI 440C o 420C - Available stainless steel Housing: AISI 304 - Bearing: AISI 440C or 420C  
 Disponibile su richiesta con cuscinetto SA (SAF.) - Available under request with SA bearing (SAF.)

HCF2 Serie normale - Standard duty

Disponibile in acciaio inox Supporto: AISI 304 - Cuscinetto: AISI 440C o 420C - Available stainless steel Housing: AISI 304 - Bearing: AISI 440C or 420C  
 Disponibile su richiesta con cuscinetto SA (SAFL) - Available under request with SA bearing (SAFL)

HCFL2 Serie normale - Standard duty

Supporti in serie leggera in lega d'alluminio, fissaggio con grani. Un nuovo concetto di supporto; offre una significativa riduzione di peso ed ingombro rispetto alle normali serie, con risparmio economico nella progettazione di macchine.  
 Extra light duty bearing units available with set screws, a totally new concept in bearing units, offer a significant reduction in size and weight when compared with the same size of existing series. This unique design promotes both space and material saving in machine tool and general equipment application.

I coperchi sono disponibili su richiesta - Covers are available under request

Gli ingrassatori e oliatori ISB sono costruiti in Lexan® trasparente, un materiale plastico ad alta resistenza meccanica, chimica e termica; questa soluzione permette di visualizzare il consumo del lubrificante in qualsiasi momento. All'interno delle capsule in Lexan® è presente una molla che permette di attivare immediatamente gli ingrassatori e oliatori ISB, che non necessitano quindi di energia elettrica o gas per funzionare; il flusso di lubrificante è sempre costante, senza accumuli solidi, ottenendo così un forte risparmio in termini di fermi di produzione ed eventuali riparazioni. Gli ingrassatori e gli oliatori ISB possono essere ricaricati più volte tramite l'ingrassatore laterale H (su richiesta disponibile in versione DE); essi sono installabili ovunque ci sia un punto da lubrificare (cuscinetti, boccole, snodi ecc).

The ISB greasers and oilers are made of transparent Lexan®, a plastic material with high mechanical, chemical and thermal resistance; this solution allows to control the consumption of the lubricant at any time. Inside the Lexan® capsules there is a spring that allows an immediate activation of the ISB greasers and oilers, so they do not need any electrical energy or gas to operate; the lubricant flow remains constant, with no solid matter accumulation and consequently there is an high saving in terms of production stops and possible repairs. The ISB greasers and oilers can be refilled more times from side lubricator H (under request the DE side lubricator is available); they can be installed wherever a point to be lubricated is present (bearings, bushes, joints etc).

Disponibile in acciaio inox AISI 440C o 420C - Available stainless steel AISI 440C or 420C

\*Fornito con schermo antipolvere a stella, grano con sfera e anello interno brunito - Equipped with anti-rust shield star shape, screw with ball and burnished inner ring

HC2 Serie normale - Standard duty

Suffisso UNF: Misure in pollici dei grani di bloccaggio  
UNF suffix: inch sizes set screws

## TOLLERANZE SUGGERITE PER SEDE CUSCINETTO - RECOMMENDED FITS OF BEARING HOUSING TOLERANCES

SUPPORTO UNICO O IN DUE PEZZI SPLIT OR SOLID HOUSING	Condizioni di carico Load conditions		Esempio di riferimento Reference example	Tolleranze Tolerances	Anello esterno Outer ring
	Direzione di carico non determinate Direction of load indeterminate	Carico normale e leggero Normal and light load	Motori elettrici, pompe Electric motors, pumps	J7	Possibilità di spostamento Can be displaced
Carico dell'anello interno rotante Rotating inner ring load	Carichi di tutti i tipi Loads of a kinds	Applicazioni generali di cuscinetti e boccole Bearings and bushes general applications	H7	Possibilità di facile spostamento Can easily be displaced	
Carico dell'anello interno rotante Rotating inner ring load	Carico leggero e normale Normal and light load	Supporti Plummer blocks	H8	Possibilità di facile spostamento Can easily be displaced	
Carico dell'anello interno rotante Rotating inner ring load	Incremento della temperatura dell'anello interno attraverso l'albero High temperature rise of inner ring through shaft	Essiccatoi per carta Paper dryers	J7	Possibilità di facile spostamento Can easily be displaced	

**TENUTE "TSNG" SIA PER ALBERI METRICI CHE IN POLLICI**  
 "TSNG" SEALS FIT BOTH METRIC & INCHES SHAFTS

**DISPONIBILE PER MONTAGGIO A QUATTRO-FORI**  
 AVAILABLE FOR FOUR-BOLT MOUNTING

Coperchio di chiusura "A" per: SNG-SNU-SN  
"A" end cover for: SNG-SNU-SN

Tenuta a labirinto "TS" per: SN-SD  
"TS" labyrinth seal for: SN-SD

Se non diversamente specificato viene fornito il supporto aperto di tipo "B"  
Unless specified "B" type open housing supplied

**Caratteristiche**

- Materiale: PBT (disponibili in color bianco, nero e verde)
- Intercambiabile con supporti in ghisa
- Ingrassatori d'acciaio inox aisi 304
- Temperatura d'esercizio: da -35°C a +102°C
- Coperchio d'estremità
- Guarnizioni interne
- Resistenza chimica (pag. 150)

**Characteristics**

- Material: PBT (white, black and green colours available)
- Interchangeable with cast iron housing
- Stainless steel aisi 304 greasers
- Working temperature: from -35°C to +102°C
- End cover
- Back seals
- Chemical resistance (pag. 150)

**Caratteristiche**

- Materiale: PBT (**disponibili in color bianco, nero e verde**)
- Intercambiabile con supporti in ghisa
- Ingrassatori d'acciaio inox aisi 304
- Temperatura d'esercizio: da -35°C a +102°C
- Coperchio d'estremità
- Guarnizioni interne
- Resistenza chimica (pag. 150)

**Characteristics**

- Material: PBT (**white, black and green colours available**)
- Interchangeable with cast iron housing
- Stainless steel aisi 304 greasers
- Working temperature: from -35°C to +102°C
- End cover
- Back seals
- Chemical resistance (pag. 150)

**Caratteristiche**

- Corpo esterno supporto in poliammide rinforzata con fibre di vetro
- Guarnizioni anteriori e posteriori a tenuta stagna NBR per alberi rotanti
- Distanziale di rinforzo fissaggi in acciaio inox AISI 304
- Guarnizione OR in gomma NBR
- Ingrassatore per la rilubrificazione in ottone nichelato
- Grani di bloccaggio con sfera per una maggiore tenuta
- Fori di fissaggio intercambiabili con serie leggera

**Characteristics**

- Bearing unit body made out of polyamide reinforced with glass fibers
- Front and back seals made out of NBR rubber for turning shaft seal
- Spacer for fixing reinforcement made out of stainless steel AISI 304
- OR seals made out of NBR rubber
- Greaser for relubrication made out of nickel-plated brass
- Setscrews with ball for a perfect endurance
- Interchangeable fixing holes with light series

Disponibile anche:

**Cuscinetti a sfere in acciaio inox (AISI 440C o 420C)**

**Cuscinetti a sfere in acciaio (Cromo 100CR6 - SAE 52100)**

Per misure e carichi vedere a pagina 102

I cuscinetti sono di tipo aperto nella versione standard, sono anche disponibili con protezione singola e doppia. I valori riportati nella sopra indicata tabella si riferiscono a cuscinetti a sfere con anelli in resina acetalica (POM).

Available also:

**Stainless steel bearings (AISI 440C or 420C)**

**Chrome steel bearings (Chrome 100CR6 - SAE 52100)**

For size and load see page 102

In standard version, the bearing are open, but can also be supplied in one or double shield version. The load capacities and speed limits stated in the table above, apply only to ball bearings with ring of polyacetal (POM).

NOTA:  
I supporti a incastro EK montano gli stessi cuscinetti dei supporti FK della medesima dimensione.  
I supporti ad appoggio EF montano gli stessi cuscinetti dei supporti ad appoggio FF della medesima dimensione.

NOTE:  
In the fixed supports EK there are the same bearings of the same size of fixed supports FK.  
In the floated supports EF there are the same bearings of the same size of floated supports FF.

Per supporti di tipologia ad incastro FK, BK e EK.  
 For fixed-side support unit types FK, BK and EK.

**CARATTERISTICHE TECNICHE**

**TECHNICAL CHARACTERISTICS**

• **Materiale**

**Supporto:** Acciaio C40 rettificato.

• **Material**

**Bearing unit:** C40 rectified steel.

• **Cuscinetti:**

ISB assiali a contatto obliquo della serie dimensionale ISO 02 (codice equivalente: FAG 76020) angolo di contatto 60°.

• **Bearings:**

Angular contact thrust ball bearings ISB of dimensional series ISO 02 (equivalent code: FAG 76020). Contact angle 60°.

• **Classe di**

**precisione:** Tolleranze ridotte nella classe di precisione ISO P4 corrispondente alla classe ISO P4S.

• **Precision**

**class:** Reduced tolerances in ISO P4 precision class, corresponding to ISO P4S.

• **Precarico:**

I cuscinetti sono prodotti in esecuzione universale. I valori di precarico sono indicati nella seguente tabella e corrispondono a valori di precarico elevati. Possono essere forniti coppie e quaterne con valori di precarico a richiesta.

• **Pre-load:**

Bearings are produced in universal execution. Preload values are indicated in the following table and correspond to high preload values. Couples and quaternary groups of pre-load values can be provided by specific request.

**Supporti con cuscinetti di precisione assiali a contatto obliquo**  
*Supports with precision axial angular contact bearings*

• **Forza di serraggio:**

In presenza di una forza di serraggio eccessiva, gli anelli dei cuscinetti subiscono una deformazione elastica che provoca un aumento della forza di precarico ed una diminuzione della durata. Il valore della forza di serraggio può essere calcolata, con l'ausilio della tabella sotto riportata.

• **Tolleranze:** Le tolleranze di lavorazione e le dimensioni di montaggio sono indicate nelle tabelle a seguire:

• **Clamping force:**

In case of very strong clamping force, bearings rings are affected by an elastic deformation that causes an increase of the pre-load force together with a shortening of the duration. The value of the clamping force can be calculated by means of the table below.

• **Tolerances:** The following table reports the working tolerances and the mounting dimensions:

FORZE DI SERRAGGIO F <sub>2</sub> CONSIGLIATE - RECOMMENDED F <sub>2</sub> CLAMPING FORCES							
Disposizione cuscinetto <i>Position of the bearing</i>							
F <sub>z</sub> [N]		3 - F <sub>v</sub>		4 - F <sub>v</sub>		6 - F <sub>v</sub>	
Filettatura Thread	M5	M6	M8	M10	M12	M14	M16
Fattore F Factor F	0,98	1,18	1,55	1,9	2,35	2,7	30,5

La forza di serraggio F<sub>2</sub> viene raggiunta quando le viti del coperchio vengono serrate con la coppia M.

$M = Fz/f[Nmm]$

N = Numero di viti del coperchio

f. = Fattore di correzione

Clamping force F<sub>2</sub> is achieved when the cover's ball screws are clamped with the M couple.

$M = Fz/f(Nmm)$

N = number of cover's ball screws

f. = Correction factor

**TOLLERANZE DI LAVORAZIONE DEGLI ALBERI E DELLE PARTI ADIACENTI**

- Tenute:** I segmenti lamellari fey a 3 anelli espansori singoli, tipo FK3 AS, costruiti in acciaio per molle C75, creano una classica tenuta a labirinto.
- Lubrificazione:** Grassi al sapone di litio, con additivi EP come ad esempio il grasso ARCANOL L 135V, consistenza 2, °C - 40 + 150. I supporti sono già forniti lubrificati, con la quantità indicata nella tabella seguente.
- Seals:** Spathic segments fey with three expander rings, FK3 AS type, made of steel for stainless steel C75 springs, create a typical labyrinth seal.
- Lubrication:** Lithium soap greases with EP additives like ARCANOL L 135V grease, consistency 2, °C-40 + 150. Bearing units are supplied when already lubricated in the quantity indicated in the next table.

**Supporti con cuscinetti di precisione assiali a contatto obliquo**  
*Supports with precision axial angular contact bearings*

**Quantitativi di grasso per cuscinetti assiali a sfere a contatto obliquo, ad una corona.**  
*Quantities of grease for angular contact axial ball bearings, single row.*
